

INSIGHT

WTC COMMUNITY WEEKLY

Secure Your Data

It's not the first time we hear about breach and leaks on personal data, documentations and files online.

Private information on individuals, institutions, even governments are being sold on the dark web.

So what should we do to make ours safe?

- Create strong and unique passwords
- Control access to data and system, online and physical
- Don't overshare on social media
- Use free Wi-Fi with caution
- Make sure the site is secure with a lock symbol on the URL
- Put up firewall and security software
- Turn on remote-tracking feature to lock your device if lost
- Enable encryption and save a back up
- Be suspicious over links and attachments
- Don't share your OTPs with anyone

NEXT THURSDAY!

Yours truly,

the community editor
